Monthly Solar Bill

Total Bill

Yearly Increase

State Tax Credit = \$5000

\*IGS estimates your year 1 energy rate with your utility by dividing your estimated annual utility bill by your estimated annual energy consumption. Similarly, we calculate your year 1 IGS energy rate by dividing your annual IGS bill by your solar system's annual production. Yearly increase is an estimate only and is subject to change. This proposal is an estimate and does not guarantee actual system production or savings. The system design may change based on a detailed engineering site survey. Actual system production and savings will vary based on the final system size, design, configuration, utility rates, applicable rebates, actual sales tax owed by you, and your family's energy usage.
